**Subject:** DRAFT Dimock PADEP-provided data summary table

I attached this very preliminary data table. I suggest that you double check to confirm any specific constituents you plan to point out (the strange ones) before including in a formal letter to DEP. This table must be run through some QC/tech review internally before we (ATSDR) finalize and I need to add some comparison values for our evaluation. I think there are enough oddities though to leave us all with questions about this area's groundwater quality.

To be clear, this is only the DEP provided data (not the data from Tate Kunkle). It is maximum values from groundwater in each resident's well, not the most recent result from each well. If the maximum value was post-treatment, I marked it as such. Many questions remain!!

I am out until Monday for a break, but will be checking emails intermittently.

The table is already set up for printing on 3 pages with the proper headers and left columns in place.

Have a great holiday!
